Abstract:

Social networking sites (SNS) have brought new opportunities for students in not only the learning process but also career prospects. However, there is a lack of research on the impact of ways of using online networking on profession progress among tertiary students. This paper aims to empirically investigate the ways in which Vietnamese students utilize this new technology and how these SNS support their future career development by using mixed methods in researching. The study concludes with a discussion of the limitations and implications of this study, along with directions for further research.

Keywords: Social networking sites, learning process, career prospects, profession progress, tertiary students.
